Science Challenge

Safe, Endangered, Or Extinct?

Create a 3 column table and list a minimum of 20 animals per column. Title the three columns: Safe Animals, Endangered Animals, and Extinct Animals.

Based on observations you make from these groups of animals (what does each group have in common with each other?) Create a hypothesis stating your theory as to what factors go into making an animal safe, endangered, or extinct.

Send your results to Eco Hero Kids for your Science Badges.
